EFFECT OF INCA ON CALCIUM LEVELS AND DRY MATTER IN RASPBERRY PLANTS

Valuation of INCA effect on the levels of calcium and dry matter content in berry on soil grown Tulameen Raspberry

No APPLICATIONS: 3

Dose: INCA: 1.0 lt per Ha

Control : Seniphos 4.5% CaO: 3 lts per ha

Timing : applications at two week intervals from flowering to harvest

LOCATION:

Berkshire, England,

COMMENTS

INCA increased the Brix level by 0.9° in the fruit with only 30% of applied calcium. Fruit dry matter was increased by 14% which directly effected yield at 2-3 grams per berry.
